

The following two lists outline the broad spectrum of outdoor activities and skills that have made up the outdoor curriculum of EDTS over the past decade plus. Many of these activities and skills will be a part of the upcoming Endurance curriculum. It is not an exhaustive list, but it will give prospective students a good understanding of what the outdoor component of EDTS looks like. In some cases the activity itself is a skill-set building opportunity and vice versa.

We are always looking to translate outdoor/backcountry skills into tangible mission field skills and strategies. In most cases, we do go deeper than simply introducing a skill-set but in order to expose students to as many different outdoor skills and activities we can't guarantee that we will go as deep as intermediate and advanced level training.

Regardless of how deep into a skill-set or activity we go, the goal is always to take advantage of application opportunities throughout the lecture and outreach phases and to put into practice what we are learning. This is the essence of experiential education.

Activities

- Hiking
 - Trails, day-hikes, nature hikes
- Overnight camping – front-country and backcountry
- Backpacking/backcountry trip
- Rock Climbing
- High ropes course (dynamic and static)
- Mountain biking
- Kayaking/ SUP (Stand Up Paddle boarding)
